Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Knopf 5147200 that teaches the invention as claimed: a method for the combustion of gaseous and/or liquid fuel in lean premix burners (fig. 3), producing a swirling flow of the air/fuel mixture through a mixing section 4 projecting into the combustion chamber, wherein the fuel/air mixture is preheated before combustion by combustion gases sucked in at 7 directly out of the combustion chamber 1 and upstream the mouth of the mixing section 4, through apertures in the housing jacket of the mixing section (see 9) at 40% recycling of flue gases (col. 1, l. 54, and claim 2). With regard to claim 5, note that from fluid mechanics point of view, the flowing air/fuel mixture must suck in the combustion gas, otherwise there couldn't have been any flow into the burner. Wherever there is flow - inherently there must be suction.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3746

4. Claim 8 is rejected under 35 USC 103(a) because Official Notice is taken that the claimed method using the disclosed combustion chamber and burners were known to be used in gas-turbine power plants made by the assignee.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Knopfel 5423674.
